

ON-THE-FLY DEVICE CONFIGURATION

Introducing PARC –
The Panasonic Rapid Configuration Tool

PARC (Panasonic Rapid Configuration) is an easy-to-use staging tool for the fast configuration of one or many Toughbook Android devices in your business. PARC enables the customer to deploy multiple settings profiles to their target devices in an instant, whether in the field or with the customer.

- Quick, simple and scalable configuration of devices via the PARC console
- No connection to an online server required
- Units can be configured in multiple locations depending on customer preference
- Manage multiple profiles from one central console
- Take complete control of device security
- Quick and easy QR code based staging

Easy operation for rapid configuration

Using PARC couldn't be any more simple or straightforward. Via the intuitive PC or web-based PARC console, the customer can configure a huge range of settings to create profiles. These profiles are then output as QR codes, and then scanned using the device(s) you want to configure.

Taking security seriously

Because security is such a critical concern today, you can encrypt the profile QR codes with a password, ready for future deployment. And while the profiles can be as simple or as complex as you need, the QR code scanning means their deployment is always fast and easy.

Another chapter in the COMPASS story

PARC is yet another offering available as part of our COMPASS – Complete Android Services and Security – suite, which gives you everything you need to deploy and manage your Panasonic rugged Android devices securely in your business.
