

Auto-Tracking Software Key

AW-SF200

Clear, Sharp Video Lecture Capture with Auto-Tracking of the Speaker

KEY FEATURES

- Server based
- High-precision Tracking by Motion Detection
- Face Recognition
- IP-based software to support remote operation
- GUI for intuitive settings

Panasonic's software assists automatic tracking of a person shot by a Panasonic Remote Camera. With the ability to track a single person, this software is well suited to such environments as education and video conferencing.

With a PC connected to the same network as your camera system, the software automatically detects a person in front of a PTZ camera and makes the camera follow that person to allow for easier control operations.

The use of "motion detection" technology makes it possible to track the subject with minimum tracking error regardless of where the person is facing. This allows to keep the lecturer tracked even when he/she is writing on a blackboard showing their back to the camera.

The sensitivity of the tracking function can be adjusted to the amount of movement of the tracked target, increasing accuracy further.

All current Panasonic PTZ software is PC-based only.

Latest Update

- Enhanced User Authentication Function

- AW-UE150 series was added to supported cameras.
- New "Human Body Detection" with "Deep Learning" (64-bit Version only)
- New stream support with H.264 & NDI|HX.
- New "Use Face Data from Library" feature
- Pre-set GUI Improvement
- Improvement of Face Recognition GUI
