# Quicklink Studio Solution

The Studio solution is a bi-directional calling solution, in real time, full duplex audio that can provide instant resources that can be used in various locations. Content can be provided using the Studio-in-a-box or Chrome browser.

The Studio-in-a-box is a one-button operation at the remote end whilst the camera, lighting and audio can be fully controlled and managed by an Operator from any web browser. The Studio-in-a-box can deliver content quickly and with ease.

Quicklink Manager

The Quicklink Manager is available to use from any web browser. It has multiple layers of operational security ensuring the highest levels of data security and integrity. Instead of multiple portals to manage the camera, lighting and audio, the Quicklink Manager allows simple and intuitive management from just one central portal. Just click and drag to manage live productions!

Quicklink Studio Server

The Quicklink Studio Server can receive audio and video from any Quicklink Studio contributor and output via SDI/HDMI and NDI.

QUICKLINK
Video Over IP Solutions

Fully control and manage your contributors quickly, easily and efficiently.

The Studio in a Box will enhance capacity in your existing workflow and allow you to receive more content on demand. One time scheduling and allocation for limited staff resources will allow you to accomplish missions using the Quicklink Studio Solution to command and control live events.

The intuitive Quicklink Manager dashboard and monitoring portal will enable you to have full control and service usability allowing you to provide direction and management of a live event.
