

PAM Version 1.1

Paxton Integration

PRODUCT FEATURES

Panasonic Alarm Manager (PAM) further enhances a Panasonic IP CCTV system by enabling advanced alarm handling between alarm sources and targets. PAM also allows for the integration with many third-party systems to create a very versatile and flexible alarm handling solution.

Main function of PAM is to be able to accept alarm inputs simultaneously, and from those to be able to generate a number of subsequent actions. Alarm actions include camera preset calls, start recording, call video images to monitors etc.

PAXTON INTEGRATION

PAM receives events notifications from Paxton through Net2 Access Control over TCP/IP. All ACUs are registered with Net2 for events monitoring. Following events are supported in this integration:

Access Grant	Access Permitted, Valid Pin, Card Swipe
Invalid Card Swipe	Access Denied, Invalid Card
Door Open	Door: Open, Force, Left Open, Bell Pressed
Main Failed	Mains Failed Notification
Tamper Alarm	Door Tamper Alarm
Net2 Access Control	Communication status with Net2
ACUs Status	ACT on-line / off-line status

- Maximum 25 doors events can be monitored
- Net2 OEM SDK (V4.22) - This SDK is installed at PAM PC
- Net2 Access Control Version 4.23
- PAM Version 1.1
